Not Worth The Risk

"Nothing bad will happen. Trust us." **Now where might we have heard that before?**

Even with the latest technology and best intentions, accidents do happen. Are we willing to risk one of the world's richest hunting grounds to a risky foreign-owned scheme to develop massive mines in southwest Alaska?

Alaska's famed Bristol Bay region is home to some of the finest hunting on the planet for caribou, moose, and brown bear. These rugged and remote lands also support the biggest wild salmon fishery on the planet. Alarmingly, 2,500 square miles of prime habitat in southwest Alaska is at risk of being transformed into a massive mining district. It's hard to imagine the region's game and fish doing well among a network of roads, open pits, and toxic tailings ponds.

Hunting is a proud American tradition. For hunting to continue, we need strong and stable game populations and the habitats to support them. In this case, the risk of industrial development to future hunting opportunities and our hunting heritage is simply too high. **Protect Bristol Bay.**
